                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 5: Page 42: 58pp: Laganese.

Claim 5: Page 42: 58pp: Laganese and the processor sequence represents a multi-epitope peptide which is used as a new immunotherapeutic agent. It comprises I cell epitope regions from 2 or none different allervens (preferably linked via arginine or lysine dimens), where the I cell epitope regions: have a spositivity index greater than 100 as measured in a patient group responding to the allervens and are not reactive with immunoslobulin E (igb) untipodies irom patients responding to the allergen and are not reactive with immunoslobulin E (igb) untipodies irom patients responsive to the alleratem. The about once the used to prevent and treat a wide variety of alleratic diseases, e.g. by desensitisation, side effects, e.g. those mediate; ly 102, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     :

When periodics derived from cedar pollen allergens - activate allergen-specific Teells, but not allergen-specific Igs antibodies.

Jaim El page 3132: 56pp; English.

Synthetic peptides base on portions of cedar pollen allergens A (RB199) and B (RB199) were tested for their doubley to activate a specific Ircells, but not allergen-specific Igs antibodies. 6 Peptides (RB189) were 1dentilied as Treell epitodes. 1 hase peptides, 10 Ns subsequences (RB19179) essential epitodes. 1 hase peptides in subsequences (RB19179) essential confront as immittation, and horologous peptides (RB189 96) can be useful as immittation, and horologous peptides (RB189 96) can be useful as immittation, and horologous peptides (RB188 96) can be useful as immittation and horologous peptides (RB188 96) can be useful as immittation and horologous analysis.

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Scoring table:

Minimum Match 0% Listing first 45 summaries Post-processing:

swiss-prot38

Mean 22.858; Variance 21.70%; scale 1.053 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 21.880; Variance 21.726; scale 1.007 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Peptides derived from Japanese cedar pollen antigens are minumoncherapeutic agents. useful for allergy treatment and typing HLA class II molecules in allergy sufferers
Claim 12. Page 26, 50pp; Japanese.
This sequence represents rest use 109-117 of the Cry j i protein, and is a peptide of the invention. The peptides are derived from Japanese cedar pollen antigens, and are used as immunocherapeutic agents in the treatment of allergy. The peptides can be used for identification and typing of the particular HLA class II molecules in an allerdy sitterer, and also for peptide immunotherapy of an allergy. Using these peptides the immunotherapy can be targeted more specifically to the requirements of the individual patient, allowing more effective treatment of an allergy, including those patients for whom treatment with a conventional immunotherapeutic agent is ineffective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               347.5

                                                                                                                      Peptides delived from Japanese cedar pollen antigens are peptides delived from Japanese cedar pollen antigens are immunocherapeutic agents - useful for allergy treatment and typing HLA class II molecules in allergy sufferers claim 12, page 26: 06pp; Japanese.

This sequence represents residues 106-120 of the Cry iI protein, and its a peptide of the invention. The peptides a derived from Japanese cedar pollen antigens, and are used as immuno herapeutic agents in the treatment of allergy. The peptides can be used for identification and typing of the farticular H.A class II molecules in an allergy sufferer, and also for peptide immunocherapy of an allergy. Using these peptides the immunocher py can be targeted more specifically to the requirements of the individing those patients for whom treatment of an immunocherapeutic agent is ineffective.

NEUL WILL WILK PROD CO LITE.
NPW CYPEROMERIA police allerate in coll epitope peut. 3c - used for herecardion, treatment and investigation of Japanese cedar pollen allerace Cryl I. from which the T-cell epitope peptides R89289-R89295 were derived. The peptides can be used for the prevention and treatment of cryptomeria pollencisis, and also for the investigation of pollenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12-MAR-1996 (:1rs: entry)
Japanese cedar pollen alleruen Cryj I derived T-cell epitope peptide.
Sapanese cedar: pollen allergen: Cryj I: T-cell epitope: peptides;
prevention: treatment: cryptomeria pollenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Wolfied Cryptomeria japonica (Cry j): peptide(s) - useful for interacting allergy to japanese cedar follen allergen or immunologically cross reartive allerances.

Sisclosure: Fluury 2: 51pp; Enalish.

Novel peptides of cry j have been mudified as a part of a preformulation scheme to develop an optimised drug product for preformulation scheme to develop an optimised drug product for therapeutic treatment of humans sufferling from alleray to Japanese cedar pollen allergen which is immunologically cross reaction characteristics which render them particularly possess certain characteristics which render them particularly cuitable for drug product formulation. Peptide fragments of Cry j: modified and unmodified, are given in R82491-R82255. This peptide fragment corresponds to amino acids 101-120 of the allergen mature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ġ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..

He sequence is that of an isolated peptide of the Japanese cedar polite atlergen Cry 1 (amito acids 101-120). The peptide. CJI-13, can be used for the treatment and diagnosis of allergies associated with Japanese cedar pollen. It has enhanced therapeutic properties but reduced side effects compared to naturally occurring allergens. Sequence 20 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gabs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          d:
from different allerges of the property of the present allerges of the present allerges of the present allerges of the present sequence represents a multi-epitope supplies which is used as a new immunotherapeutic agent. It comprises T ceil epitope regions from 2 or more different allergens (preterably linked via arginine or lysine dimers), where the T ceil epitope regions have a positivity index greater than 100 as measured in a patient group responding to the allergen; and are not reactive with immunoglobulin E (igh) antibodies from patients responsive with immonoglobulin E (igh) antibodies from patients responsive to the allergen. The agent can be used to prevent and treat a wide variety of allergic diseases, e.g. by desensitisation. Side effects, e.g. those mediated by igt, are reduced.

It comprises I cell epitope requents from 2 or more different allergens (preferably linked via arquime or lystme dimers), where the I cell epitope requions; have a positivity index greater than 100 as measured in a patient group responding to the allergen; have at least 70% reactivity with lymphocytes from patients responding to the allergen; and are not reactive with immunosionous E responding to the allergen; and are not reactive with immunosionous be used to prevent and treat responsive to the allergen; and desensitisation, side effects, e.g. those mediated by 19E, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              32.70
24.MAR-1998 (first entry)
Mulli-epitope peptide used as immunotherapeutic agent #5.
Mulli-epitope peptide: immunotherapeutic agent; allergic disease.
Theeli epitope region; allered; lymphocyte; immunoalobalin E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Multi-epitope peptide used as immunotherapeutic agent *!.
Multi-epitope peptide: immunoth..apeutic agent; allergic disease:
T-cell epitope region: allerge... ymphocyte: immunogiobuli: E.
                                                                                                                                                                                                                                                                                                                                                        12-SEP-1997

Claim 5: Page 32: 58pp: Japanese.
The present sequence represents a multi-epitope peptide which is used as a new immunocherapeutic agent. It comprises I cell epitope regions from 2 or more different allerens (preferably linked val aranine or lysine different allerens (preferably linked val aranine or lysine different s), where the T cell epitope regions: have a positivity index greater than 100 as measured in a patient group responding to the allerent seconding to the allerent and are not reactive with immunoglobilin E responding to the allerents responsive to the allergen. The agent can be used to prevent and treat a wide variety of allergic diseases, e.g. by desentitisation. Side effects, e.g. those mediated by 19E, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-MAR-1998 (first entry)
Multi-epitope peptide used as immunotherapeutic auent *5.
Multi-epitope peptide: immunotherapeutic agent: allergic disease:
I-cell epitope region: allergen: lymphocyte; immunoglobulin E.
Synthetic.
                                                                                                                                                  Multi-epitope peptide used as immunotherapeutic agent #2.
Multi-epitope peptide: immunotherapeutic agent; allergic disease:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10-WRR-1996: JP-080722.

Application US/D8459264
Patent No. 5705340
GENERAL INFORMATION:
BAPLICANT: BASMOSSEN, Beth A
APPLICANT: TALLY, Francis P
APPLICANT: TALLY, Francis P
APPLICANT: TALLY, Francis P
APPLICANT: TALLY, PAKOV
IIILE OF INVENTION: OF CLASS B BETA-LACTAMASE ENZYMES FROM BACTEROIDES
TITLE OF INVENTION: PROGILIS
NUMBER OF SECUENCES: 9
CORRESPONDENCE ADDRESS:
APPLICANT: RASMUSSEN, Beth A
APPLICANT: TALLY, Francis P
APPLICANT: GLUZMAN, YAKOV
11TLE OF INVENTION: DNA SEQUENCES AND AMINO ACID SEQUENCES
TITLE OF INVENTION: OF CLASS B BETA-LACTAMASE ENZYMES FROM BACTEROIDES
TITLE OF INVENTION: FRAGILIS
